

Hologram AI — Product Concept & Content Pack

Elevator Pitch

Hologram AI is a real-time telepresence system that projects a life-size, 3D holographic presence of a remote person into your room—so conversations feel like sitting face-to-face. No video tiles. Natural eye-contact, spatial audio, and body language—restoring confidence, comfort, and clear communication.

Problem

Video calls flatten humans into 2D squares, reducing presence and non-verbal cues. In high-trust conversations, this creates discomfort, misunderstanding, and fatigue.

Solution & How It Works

Volumetric capture (depth + RGB + pose) → neural compression → low-latency transport → life-size holographic rendering with spatial audio. People perceive each other across the table, not through a screen.

Capture Options:

- Single-camera depth rig (MVP).
- Multi-camera volumetric booth (enterprise).
- Mobile LiDAR capture where available.

Render Options:

- Light-field/pepper-scrim kiosk.
- AR/spatial glasses for portable setups.
- Transparent OLED/holographic fans (partial body).

Core Stack:

- AI vision (depth completion, segmentation, relighting, NeRF/diffusion view synthesis).
- Low-latency transport (WebRTC/QUIC), edge compute, neural codecs.
- Spatial audio, echo cancellation, lip-sync, gaze correction.
- Security & privacy: encryption, access control, audit logs.

Key Features

- One-tap connect; life-size projection; true eye-line.
- Spatial audio & beam-forming mics.
- Gesture/expression fidelity; relighting; background separation.
- Recording & replay; watermarking; consent prompts.
- Admin controls; enterprise security (SSO/SCIM).

Use Cases

Leadership townhalls, enterprise sales, tele-education, telemedicine, hiring panels, family/life events.

Product Tiers

V1 (MVP): torso-up hologram, 20–30 fps, kiosk projection, India beta.

V2 (Pro): multi-camera capture, full-body, occlusion handling, cloud+edge orchestration.

V3 (Enterprise): multi-site mesh, recording, compliance packs, APIs/SDKs.

Privacy, Safety & Ethics

Opt-in consent, encryption, secure deletion, watermarking, accessibility (captions/translation/audio description).

Success Outcomes

2–3× higher comfort & trust vs. video calls; faster decisions; improved sales close-rates & learning outcomes.
